The 1701 and 1702 may be erased by exposure to high intensity short-wave ultraviolet light at a wavelength of 2537 Å. The recommended integrated dose (i.e., UV intensity x exposure time) is 6W-sec/cm². Example of ultraviolet sources which can erase the 1701 or 1702 in 10 to 20 minutes is the Model S-52 and Model UVS-11 short-wave ultraviolet lamps manufactured by Ultra-Violet Products, Inc. (San Gabriel, California). The lamps should be used without short-wave filters, and the 1701 or 1702 to be erased should be placed about one inch away from the lamp tubes.

B. MP7-03 Programming System

The MP7-03 is the PROM programming board which easily interfaces with the SIM8-01. All address and data lines are completely TTL compatible. The MP7-03 requires +5VDC @ 0.8 amps, −9VDC @ 0.1 amps, and 50 Vrms @ 1 amp. Two Stancor PB180 (or equivalent) filament transformers (25.2 Vrms @ 1 amp) with their secondaries connected in series provide the 50 Vrms.

This programmer board is the successor of the MP7-02. The MP7-03 enables programming of Intel’s new 1702A, a pin-for-pin replacement for the 1702.

When the MP7-03 is used under SIM8-01 control with control ROM A0862 replaced by A0863, the 1702A may be programmed an order of magnitude faster than the 1702, less than three minutes.

**IMPORTANT:**

Only use the A0863 control PROM when programming the new 1702A. Never use it when programming the 1702. The programming duty cycle is too high for the 1702 and it may be permanently damaged.

The MP7-03 features three data control options:

1) Data-in switch (Normal-Complement). If this switch is in the complement position, data into the PROM is complemented.

2) Data-out switch (Normal-Complement). If this switch is in the complement position, data read from the PROM is complemented.

3) Data-out switch (Enable-Disable). If this switch is in the enable position, data may be read from the PROM. In the disable position, the output line may float up to a high level (logic “1”). As a result, the input ports on the prototype system may be used for other functions without removing the MP7-03 card.

**MP7-03 Programmer Board Specifications**

Features:

- High speed programming of Intel’s new 1702A (three minutes)
- Inputs and outputs TTL compatible
- Board sold complete with transformers, capacitor and connector
- Directly interfaces with SIM8-01 Board

Dimensions:

- 8.4 inches high
- 9.5 inches deep

Power Requirement:

- \( V_{CC} = +5 @ 0.8 \) amps
- \( \text{TTL GRD} = 0V \)
- \( V_{PD} = -9V @ 0.1 \) amps
- \( V_{PP} = 50\text{Vrms} @ 1 \) amp

Connector:

- a. Solder lug type/Amphenol 72 pin connector P/N 225-23621-101
- b. Wire wrap type - Amphenol 72 pin connector P/N 261-15636

*This board may be used with a −10V supply because a pair of diodes (i.e. 1N914 or equivalent) are located on the board in series with the supply. Select the appropriate pin for either −9V or −10V operation.

A microcomputer bulletin which describes the modification of the MP7-02 for programming the 1602A/1702A is available on request. These modifications include complete failsafe circuity (now on MP7-03) to protect the PROMs and the 50V power supply.
C. Programming System Interconnection

NOTES:
1. SIM8-02 Connector:
   [Diagram of SIM8-02 Connector]
   86 pin connector P/N 281-100042.
2. MP7-02 Connectors:
   a. Solder lug type/Amphenol
   b. Wire wrap type/Amphenol (shown above)
      72 pin connector P/N 281-15646-2.
3. If the use of the 24 pin socket on the MP7-03 is not desired, the pin connections for external socket are as follows:

   **EXTERNAL SOCKET PROGRAMMING**

<table>
<thead>
<tr>
<th>FUNCTION</th>
<th>MP7-02 PIN</th>
<th>MP7-03 PIN</th>
</tr>
</thead>
<tbody>
<tr>
<td>A1 &quot;OUT&quot; DEVICE UNDER TEST</td>

</table>

The complete interconnection between the SIM8-01 and the MP7-03 is provided by the MC88 10 system interface and control module.
